AGM Repeater Report 9th August 2011

I am pleased to report to our members that we have had a year of good service from our repeater network.

There was very little down time due to out of service equipment. Although the time taken to access many of the sites increased due to poor weather. Some of the general maintenance that has been undertaken include, power supplies blown out by lightning strikes, as well as a triband aerial failed causing 3 repeaters to go down. Getting to the repeater sites proved challenging at times, Ross got bogged and 4x4 vehicles have been needed to access sites where access roads have been washed out by rains.
